### Profile

Graduate of Computer Engineering. Possess strong skills in Angular 7(TS), Angular Material, Bootstrap, Nebular. Implemented end-to-end AES Encryption. I have worked on few projects related to front end and back end using Angular and MEAN. My future goal is to work on react.js, jango and machine learning AI.

### Projects

7 Day

#### Coffee Shop

##### Task Project

It was a simple web app were user simply can search his desired type of coffee and its rates, and order it accordingly. Using **Angular 7 Framework**.

40 Days

#### Web-Whatsapp(Copy)

##### Final Project

It was complete copy of web whatsapp from frontend to backend as much as possible. A user can send msg to specific user and other user gets the msg in real time. User can also send images and videos as as links. Using complete **MEAN & socket.io**.

7 days

#### Kai'sa

##### Front-End

Its a social website called Kai'sa, where users can post their favorite list i.e(video, audio, books, news, food, places, sports, fashion & etc.) which can further be categorized into sublists. Users can post their favorite lists and like others post or reshare the same post with different items of list but same list title.
